

With our breakthrough in tank cleaning technology, we provide the most efficient, cost effective, and environmentally safe tank cleaning process in the industry.

TCP (Tank Cleaning Process)

Process:

- 1 - First Stage of Separation (Solids)
 - 2 - Second Stage of Separation (Hydrocarbon Recovery)
 - 3 - Third Stage of Separation (Cleaning)
- A - Injection of LGM RSP
 - B - Injection of LGM MPS-A
 - C - Injection of LGM MPS-B
 - D - General Waste Disposal of Clean Uncontaminated Solids

LGM ADVANCED TANK CLEANING SYSTEM

- Sludge removal to restore tank's capacity to nameplate working volume
- Internal cleaning adequate for inspection and repair
- Full internal surface cleaning
- Clean uncontaminated solids for general waste disposal
